

AMD-300s Illumination & Imaging System

High performance and maximum flexibility in a small package

The AMD-300s provides the superior quality images and uniform illumination you need for accurate diagnosis. All in a single integrated system that drives a wide variety of diagnostic scopes.

SUPERIOR IMAGING

The AMD-300s teams Welch Allyn's patented Solarc™ lamp with Sony's HyperHAD CCD to deliver a crisp, clear, uniform image from edge to edge. AMD's unique edge enhancement for sharper definition is a standard feature.

SUPERIOR ILLUMINATION

Welch Allyn's arc lamp produces white light for true color and the advanced design projects light into the fiber optic bundle at a wider angle, producing consistent illumination across the monitor.

EASY TO USE

Automatic white balance and iris control match the level of illumination to the needs of the camera. Just turn it on and use it.

FLEXIBILITY & ECONOMY

The AMD-300s adapts to a wide range of rigid and flexible diagnostic scopes. This maximizes your flexibility as your program grows and matures.

RUGGED CONSTRUCTION

The solid camera housing, reinforced cable and rugged system chassis guarantee long life under continuous use. The lamp will never fail during an examination and has an average life of 500 hours.

INTEGRATED SYSTEM

The camera and light source work together in a single unit, simplifying use and maximizing performance.
